Una sinfonia di media e composti chimici specializzati per la finitura delle superfici, a vostra completa disposizione.

The Rollwasch® programme of media and finishing compounds is surely one of the most complete in Europe and in the world. Rollwasch® projects always put the combination “quality - competitiveness” on the top, in the right balance and respect for the environment.

A very dynamic company in terms of research and development, Rollwasch® is always in search of the best balance between finishing solutions and pollution reduction.

QUALITY

A symphony of media and chemical compounds specialized for surface finishing, at your full disposal.

Rollwasch® chemistry started the first steps towards environmental care by introducing at the TF congress (Treatment and Finishing) in Parma in the year 1991, its first series of compounds without “difficult pollutants” (Europa series).

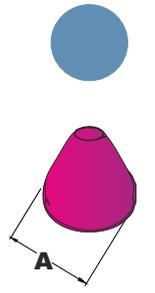

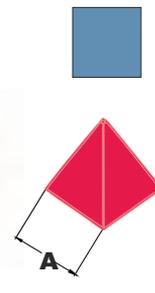

Practically this has anticipated of almost twenty years the Reach regulations and, in the meantime, we have obtained positive results. Moreover Rollwasch® supports a continuous development of products and dry processes, wet processes with low water consumption, and excellent purifying compounds.

Rollwasch® aminoplastic bonded media.

The Rollmedia UF series distinguishes the line of Rollwasch® Urea Formaldehyde-based Bonding Agent - from July 2017 available in medium-abrasive formulation (UB_Light blue) that has gained popularity and market demand over the last 35 years.

This line of products is subject of a particular research and development program aimed at identifying the possible developments of a resin with formaldehyde content even lower than the current (already minimal) or absent - the program covers a three-years period 2017-18-19 .

Product containing water-based binders - subject to modest physiological reduction

Useful information for the best use of Rollmedia abrasives.

All Rollmedia CB, PB and UF abrasive media are the evolution that allowed to replace the 'natural stones' (CB in the '50s, PB in the '60s and UF in the '80s), selected for abrasivity and dimension, with which barrelling processes were originally carried out. For decades, manufacturers including Rollwasch have tried to guide customers to choose environmentally friendly and long-life products. Nevertheless, in the last decades Rollwasch R&D activities gave the possibility to propose, in some cases, solutions able to reduce industrial muds and waste production.

Let's talk about it!

HPM - special abrasive media for dry vibratory finishing processes.

The HPM abrasive programme is addressed to the customers who want to replace the wet traditional processes with completely dry processes.

The particular nature of this kind of abrasives allows to obtain very well smoothed surfaces on many metal, plastic and natural articles.

The media HPM are offered upon technical support of Rollwasch® laboratories and technicians.

Quattrofinish special multi-purpose abrasive media for environmentally-friendly dry and wet processes.

The **Quattrofinish** (*patent pending – I*) abrasive media programme is composed of a series of geometrical shapes and dimensions studied to solve many problems.

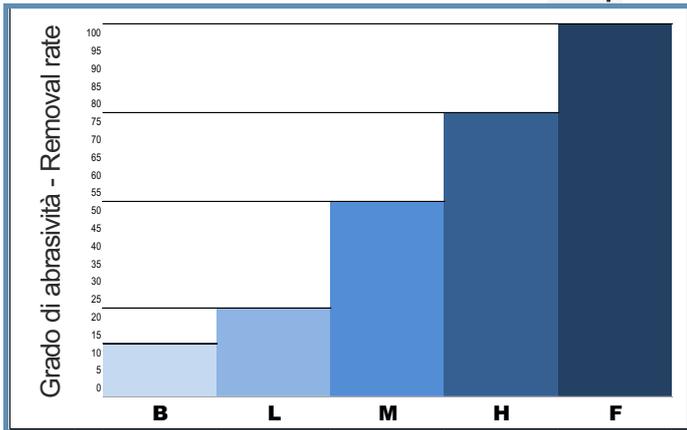

Some shapes of the classic media have always been combined with the abrasive type; with the **Quattrofinish** series, this concept can be set aside, giving more possibilities to choose among materials, shapes and relevant dimensions.

The media **Quattrofinish** are offered upon technical support of Rollwasch® laboratories and technicians.

Densità indicativa media serie CB

Rollwasch® ceramic bonded media

This series of ceramic media is distinguished by a well-researched variety of different formulations formulations that have the ceramic binder in common. The **Ceramic CB** series is articulated in various grades, which are distinguished mainly by the degree of abrasion that is articulated in five standard types. The most popular product in the treatment of metal surfaces is undoubtedly the type "H" that satisfied a large majority of customers in this field.

A great deal of attention in choosing the abrasive media is the "chipping" factor, or fragmentation in the loading stages of the pieces, especially when heavy. In this respect, it is possible to request the «conditioning» of the ceramic media (with participation to the costs) before delivery.

White porcelain (Z) or high density (DH) brown colour bonded media.

EB-Z, Euro Bond Zero Abrasivity – with high density special porcelain bonding agent - white colour - particularly suitable for Diafinish, Diagrit and Superfinish processes.
Average indicative density 2,7 - 3,0 Kg./dm³.

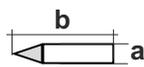

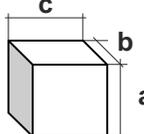

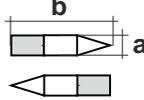

EB-DH, Euro Bond High Density - high density special porcelain bonding agent - brown/beige colour - particularly suitable for Abrakem processes.
Average indicative density 3,4 - 3,5 Kg./dm³

“Efi” special vegetable granulates and wood-chips.

A wide range of “Efi” special vegetable granulates (with high efficiency) and wood-chips both natural and pre-mixed, suitable for any kind of dry process.

Thanks to a special high-temperature impregnation, the pre-mixed granulates are ready for use, both for fine smoothing and for polishing processes, thus allowing the high finishing quality already starting from the first working process.

Thanks to this high-value impregnation, the granulates have a longer life.

TEKNOPLAST-MX

Vegetable granulates

ROLLMESH series marks the line of classic Rollwasch® vegetable granulates and offers a wide range of sizes and qualities.

The Rollmesh series is also available, on request, as impregnated type.

TEKNOPLAST marks an alternative series of synthetic granulates, particularly recommended for peculiar fields (f.e.: medical, surgical, pharmaceutical, etc.) or for all those processes where the features of a vegetable granulate could be incompatible.

Special ceramic media

CAVIAR – A special production process enables us to offer you a new Special Ceramic Media. Caviar-HD are made of sintered High Density Special Ceramic materials. Compared with other kind of media on the market, produced in a melting process, sintering minimizes air inclusions and therefore media breakage and damage of the surfaces and/or some machines like disc-finishing, for example. Thanks to this kind of finishing media a lot of applications are possible.

ZIRCONIX – zirconium spheres with high polishing properties, available in various sizes. STD: for industrial purposes - DLX with food certification.

BLACK – very high density special ceramic media particularly suitable for Abrakem, Diafinish and similar processes. This particular series of media stands out for the high finishing capacity, due to the geometrical irregularity, that allows a good surface covering, for the very high density and the brown colour.

VibroBLAST MEDIA is a series of media for sandblasting, shot peening and shot blasting compatible with the VibroBLAST technology.

The series **Rollglass** includes glass microballs with a wide range of sizes and are generally suitable for shot-peening (with proper machines) and vibratory finishing processes (alone or employed with others "media") as well as vibro-blasting.

Super Cut is a range of superabrasives often suitable for dry processes with techniques and machinery of various type. In parallel it is also foreseen the use in wet processes, in combination with other Rollkemik compounds. The compounds Super Cut are proposed upon technical support of Rollwasch® laboratories and technicians.

VibroBLAST media: wide range of sandblasting, shot peening and shot blasting media. Ideal media for VibroBLAST series machines. and for the most common sandblasting brands.

This range is made of glass microspheres, plastic grit, spherical cast steel grit, type C chrome inoxidizable grit, angular cast steel grit, ceramic grit, natural and synthetic abrasives.

Finally there are also available special grits.

rosso/bruno - red/brown
- CRND-RB:** graniglia fine - fine grit
rosso/bruno - red/brown
- CRND-B:** graniglia fine - fine grit
bianco - white

Aluminium-oxide base abrasive granular

RND-B

The high level of purity and the absence of contaminating impurities of this product, enable to obtain perfectly cleaned surfaces and ready for further treatments, they allow noble metals treatment, plastic materials, glass, stainless steel, and the use in dental field, jeweller's art etc.

CRB e CRND-RB

Red brown corundum is composed of crystalline aluminium oxide, it's characterized by its toughness and its ability to abrade quickly every kind of material. It's particularly suitable for sandblasting with recycling, thanks to its high impact resistance.

The different types and sizes enable to chose the level of abrasion suitable for every demands. Red brown corundum is not toxic and it's absolutely without any substance bad for health.

Kera-Beads

Forma Shape	mesh mesh	Dimensioni mm. Dimensions mm.	
KERA-BEADS			
	B.20	20/30	0,600-0,850mm
	B.30	30/40	0,425-0,600mm
	B.40	40/60	0,250-0,425mm
	B.60	60/120	0,125-0,250mm
	B.80	80/100	0,180-0,250mm
	B.100	90/120	0,125-0,180mm
	B.120	120/200	0,063-0,125mm
	B.125	120	0-0,125mm
	B.205	220	0-0,063mm

KERA-BEADS

The KERA-BEADS series are used both with compressed air, dry and wet sandblasting machines, and with turbine.

Use with compressed air: the high impact resistance of the KERA-Beads significantly reduces the consumption of the sandblasting material and consequently the operating costs. The ceramic microspheres produce low quantity of dust.

Their high density allows to reduce the blasting pressure, obtaining the same cleaning effect.

Turbine: KERA-Beads microspheres significantly limit the wear of the mold surfaces. The advantage is the reduction of costs both in terms of maintenance and mold replacement.

REACH regulation - acronym of Registration, Evaluation, Authorisation and restriction of Chemicals. Reach Regulations (declaration to the user)

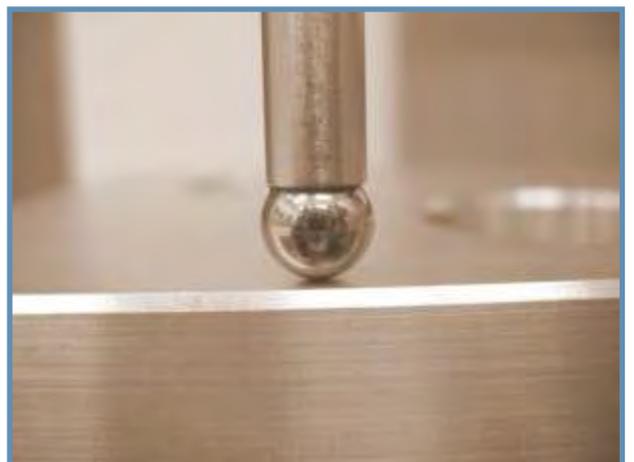

As it is well known, on 1st June 2007 came into force the REACH, i.e. the new European regulations, whose purpose is to permit a responsible use of the chemical substances. It will be steadily granted by studies on the environmental impact and on the human health through the Registration at the European Union competent organization both of the new substances and of the ones already existing on the market.

The complete application of the Regulations requires a time interval of 11 years and therefore ended in year 2018.

This phase included a first period, ended on 1st December 2008, during which the companies could pre-register their manufactured and/or imported substances in order to maintain their presence on the market.

Being our company a "final user" of substances, we have provided to ask to our raw materials suppliers to make the pre-registration of all the substances we buy and use in the formulations of the products of our production and/or supply.

Up to today, we can assure you the absolute availability of our suppliers of raw materials and substances, who has informed us to have made the pre-registration of the same, moreover we confirm you that in the Rollkemik compounds there isn't any SVHC substances presence.

Quality, according to Rollwasch®.

Quality, according Rollwasch®, is a reason for continuous growing and attention.

Each product, each device, each machinery is subjected to an endless series of checks and reviews, starting from planning, going through prototyping, till the pre-production and standard production.

Giving wide space to the communication and to the quality of opinions exchange among experienced co-operators, the range of Rollwasch® products and machinery is in continuous improving and updating.
